

Macawi Turbine Blower evaluation kit.

Macawi turbine blower,
placed in a test housing

Communication cable

Blower controller board

USB stick

Power Cable

MACAWI TURBINE BLOWER EVALUATION KIT

To give you a headstart in your ventilator development, we have created an evaluation kit of the Macawi Turbine Blower. With this plug & play evaluation kit you can easily test the performance of the Macawi Turbine Blower and adapt relevant ventilation parameters during the indesign engineering process.

With the evaluation kit, the following will be available for you:

- Access to the product support page on our website
- A technical kick-off session with our customer support engineer
- Continued online technical support during your development process regarding the Macawi Turbine Blower

To start testing with the evaluation kit, you need a computer with Windows OS and a 24V DC power supply. These items are not included in the evaluation kit.
